

KVM SWITCHES

NEWlink

2, 4 and 8 Port KVM Switches

The NLKVM-100 range of KVM switches allow the user to control multiple computers using a minimal amount of space. These switches are operating system independent which means that they will work with Windows, Mac OS and Linux, providing the devices plugged into it are compatible. Each KVM switch has a USB 1.1 hub port for data transfer between PC and an external storage device.

The KVM Switches are simple plug 'n' play units which allows the user to easily switch between PCs using either the software provided (Windows only), a hot key function or on the 8 port, an OSD. The 8 port KVM switch also comes with a rack mount kit enabling it to be installed in a 19" server rack cabinet.

2 Port KVM Switch

- Control 2 computers with 1 keyboard, monitor & mouse
- USB keyboard, mouse & VGA video
- Hot-key or push button switch function
